

BREAK BRAKE

Keep elastic breaks contained for minimal downtime.

Elastics are one of the finest materials used in hygiene products and high production speeds can sometimes cause a strand to break. When a break does occur, the loose strand can travel quickly and get caught further into the production line, requiring an operator to shut down the machine and try to find and rethread the strand. JOA's patented **Break Brake™** technology solves this problem.

Break Brake technology catches the broken elastic strand at a defined location, so the strand can easily be spotted and rethreaded. No time is wasted finding and recovering the broken stand, and downtime is minimized.

Get the upgrade kit for seamless integration.

Improve operator safety today. Our Break Brake technology is available as an upgrade kit for existing machines, and can be integrated into older machines with minimal downtime.
