

EXPANDABLE CORE WRAP

Responding to customer needs with innovative solutions.

The hygiene industry is trending toward thin, high SAP ratio cores. Modern cores maximize user comfort by providing better absorbency and a feeling of dryness. However, the increased absorbency of high-SAP cores can cause traditional core wraps to break, exposing SAP and fluff to the user's skin.

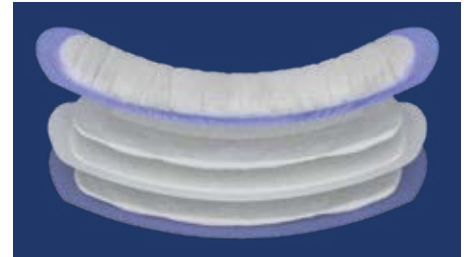

Protect your product core integrity to ensure user comfort.

Core containment means core performance. Our new patent-pending Expandable Core Wrap design allows the core to expand within the containment wrap, regardless of the blended fluff and SAP ratio. That means core materials stay contained, the risk of leakage is reduced and your customers' skin is protected.

Designed to work with many core features.

As more cores are designed with channels to improve fluid transfer, JOA provides flexibility in product design. Our Expandable Core Wrap feature is available for product cores with channels or without channels.

Get the Upgrade Kit

Available as an upgrade kit for existing machines, our Expandable Core Wrap technology integrates into older machines with minimal downtime.
