

FLEXOGRAPHIC PRINTING

The printing flexibility you need to set your products apart.

The multi-color flexographic printer is capable of printing various designs on a diverse range of ADL or topsheet materials. Integrate the printing process into your production line to reduce waste and shorten lead times. The procedure for changing patterns is quick and easy, reducing downtime and avoiding production inconsistencies.

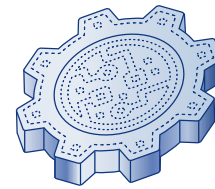

High quality at high output with flexo technology.

- Fully servo driven—adapts to the speed of the converting machine
- Efficient drying system for water based or solvent inks
- Precise registration with minimum waste

Designed with high level of flexibility and customization.

- Printing can be customized on either side of topsheet
- Create colorful consumer appealing designs and branding up to 4 colors
- Print on a wide range of substrates
- Water-based, UV- or solvent-based inks and coatings
- Operator-friendly design

Get a cleaning system upgrade kit.

Keep your printer free from accumulating contaminants for efficient operation and improved quality. JOA offers clean sheet printing systems for new lines or upgrade kits for existing lines.
