

GENTLE TOUCH FOLDER

Boost production speed without compromising the core of your product.

High speed production processes create greater force on products during folding, potentially damaging the core. Compounding the problem is the desire for thinner cores, lighter-weight materials, and discrete core designs—all of which increase the risk of product defects. The patented JOA® **Gentle Touch™** Folder creates high-quality products consistently regardless of machine speed.

Improve quality, lower costs and increase throughput.

The Gentle Touch Folder reduces the impact on the core and eliminates the product waste that results from damage. Avoid quality issues at high production speeds, increase throughput, and lower costs by running thinner, more delicate nonwoven materials with ease.

Smart technology for different product lines.

Using a lift, push, release process, the unit bi-folds baby diapers without delivering a damaging force to the product. Using the same design principle, the unit tri-folds or quad-folds adult diapers and briefs.

Get the upgrade kit for seamless integration.

Don't let your existing folding process hinder your production speeds. Our Gentle Touch Folder is available as an upgrade kit for existing machines, and can be integrated into older machines with minimal downtime.
