

NO SCRAP EAR (NoSE)

Eliminate expensive ear material waste.

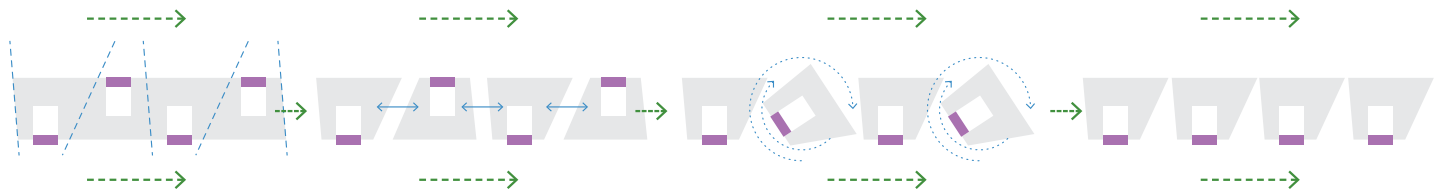

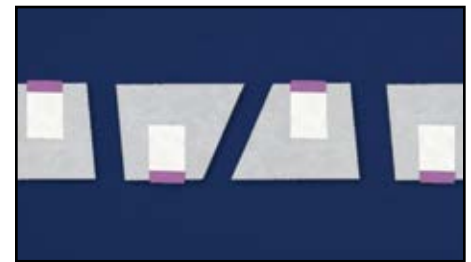

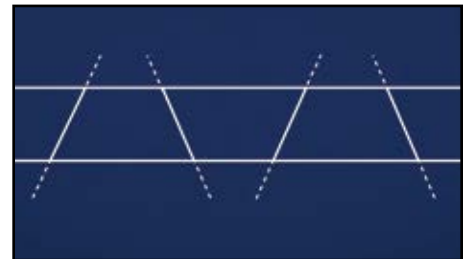

The majority of cutting processes create scrap from cutting the ear material into unique shapes. To eliminate scrap, JOA designed the patented No Scrap Ear unit which cuts ear material in specific patterns that don't produce waste, using 100% of the ear material every time. Flexible to meet your product requirements, the unit can cut multiple shapes, including symmetric trapezoids, asymmetric trapezoids, and radiused cuts.

Upgrade kit available for seamless integration.

Our No Scrap Ear unit is available as an upgrade kit for existing machines, and can be integrated into older machines with minimal downtime.
